Since the first doses of the COVID-19 vaccine arrived in Georgia in mid-December, school system employees have been anxiously awaiting their turn to get vaccinated. Their time finally came on Thursday, March 11 when Fayette

County Public Schools, in partnership with Piedmont Fayette Hospital, held the first of two vaccination clinics at Fayette County High School.

Just three days after the state opened up vaccinations to school staff, approximately 63 percent of the school system's workforce received

their first dose of the vaccine.

Thirty-two school nurses volunteered to give the vaccinations. They participated in training through the Fayette County Health Department to learn how to administer and handle the vaccine. Employees from the county office and school nutrition program

also volunteered to assist at the vaccination stations, and to input information into the Georgia Registry of Immunizations and Transactions System (GRITS).

Weeks ago, the school system entered into a partner-

ship with Piedmont Fayette to offer the Pfizer vaccine to all employees, as well as substitute teachers. By bringing the vaccine directly to employees, the school system is emphasizing its commitment to protect the health and wellness of its staff. Employees are not required to get vaccinated.

"The partnership between Piedmont Fayette and Fayette County Public Schools

to provide our educators with COVID-19 vaccination demonstrates the strength of community that we enjoy in Fayette," said Fayette County Public Schools Superintendent Dr. Jonathan Patterson. "In times of need, we come together. And as always, our entire community will reap the benefits."

Piedmont Fayette not only secured the vaccine, but also helped with staffing the clinic by providing five nurses who drew up the vaccine,

four monitors who observed employees for any reactions to the vaccine, and four registration staff who admitted employees into the clinic.

"Piedmont Fayette values our partnership with the Fayette County Board of Education and we're glad to be able to support this effort to vaccinate their teachers and staff," said Piedmont Fayette CEO Steve Porter. "We believe that vaccination plays a key role in keeping our community safe and

bringing the pandemic to an end."

School employees are scheduled to get their second dose of the vaccine on April 1. Since side effects usually occur with the second dose, which could result in a number of staff absences, students will participate in asynchronous learning from home on April 1 and 2. Teachers will prepare lessons and assignments for students to complete on those days.
