

Understanding the Pedophilia and the Brain: A Recap and Update

James Cantor, Ph.D., C.Psych.

MRI have continued to advance how we think about pedophilia. For new audiences, this workshop will review—still in English—what MRIs have done, what they can do, and what they cannot do. For audiences already exposed to this emerging field, new findings and how they explained previous questions will be emphasized. (And a refresher never hurts.) The effects these findings have had, and could have, in public conversations about pedophilia will be explored.
